

TRIMINATOR® ROSIN TRP STACK SPECIFICATIONS

MACHINE SPECS

HEIGHT 22.4 INCHES
WIDTH 27.3 INCHES
LENGTH 12.9 INCHES
WEIGHT 151 POUNDS

AC VOLTAGE 120 V
AMPS REQUIRED DEDICATED 20A CIRCUIT
PLATENS 6 INCHES BY 10 INCHES
WARRANTY 2 YEAR

KEY FEATURES

DRIP TECH WITH EASY PIVOT™
Seamless press rotation for utilizing drip technology

FOOD SAFE ALUMINUM PLATENS
Large size for maximum production area offering even consistent heat

25 TONS OF FORCE
High pressure at lower temperatures to preserve valuable terpenes

MULTI PLATEN STACK
Patented design maintains and equalizes pressure allowing for bulk presses of up to 3/4 lb per squeeze

HYDRAULIC CYLINDER
Air, electric, and manual options available

POWER FRAME™
Northern California manufactured high strength alloy steel frame

MORE ABOUT

The Rosin TRP Stack offers the same force as its predecessor but with twice the surface area to maximize production. The TRP Stack offers drip technology for faster cooling and terpene retention.

Engineered to offer simplicity in high volume extraction, the multi platen design was built for production scalability. The Rosin TRP Stack provides drip technology allowing the rosin to quickly drop to a cool surface with a seamless rotation of the platens. With 6 precision heating elements, 25 tons of force, and a high visibility design, pressing commercial volumes while maintaining consistent yields and quality has never been easier. **Pump sold separately.**
