

ZOOM PRO WITH LEAF COLLECTOR

Made in USA

In 2012 we launched Zoom Technologies and were the first double barrel trimmer on the market. Our focus is delivering high performance, high quality machines to reduce labor cost for the large-scale growers and processors.

Over the years, we have invested in research & development and taken our customers suggestions into our newest design. That is how we came up with our most recent model of the Zoom Pro.

This trimmer is the perfect fit for large-scale commercial growers and processors. With its 220-240 volt input, this machine and powerful leaf collection system is geared for high performance and engineered to be reliable. With its 10" flat free wheels, Zoom Pro is easily transportable allowing for more flexibility on job sites.

- Throughput
- Wet & Dry Trimming
- Counter-Rotate Barrel System
- Quick Release Barrel Bearing Unit
- Modularized Control Box
- Jack
- Maintenance & Cleaning
- Tandem Ready

Throughput

Up to 150 lbs wet material per hour

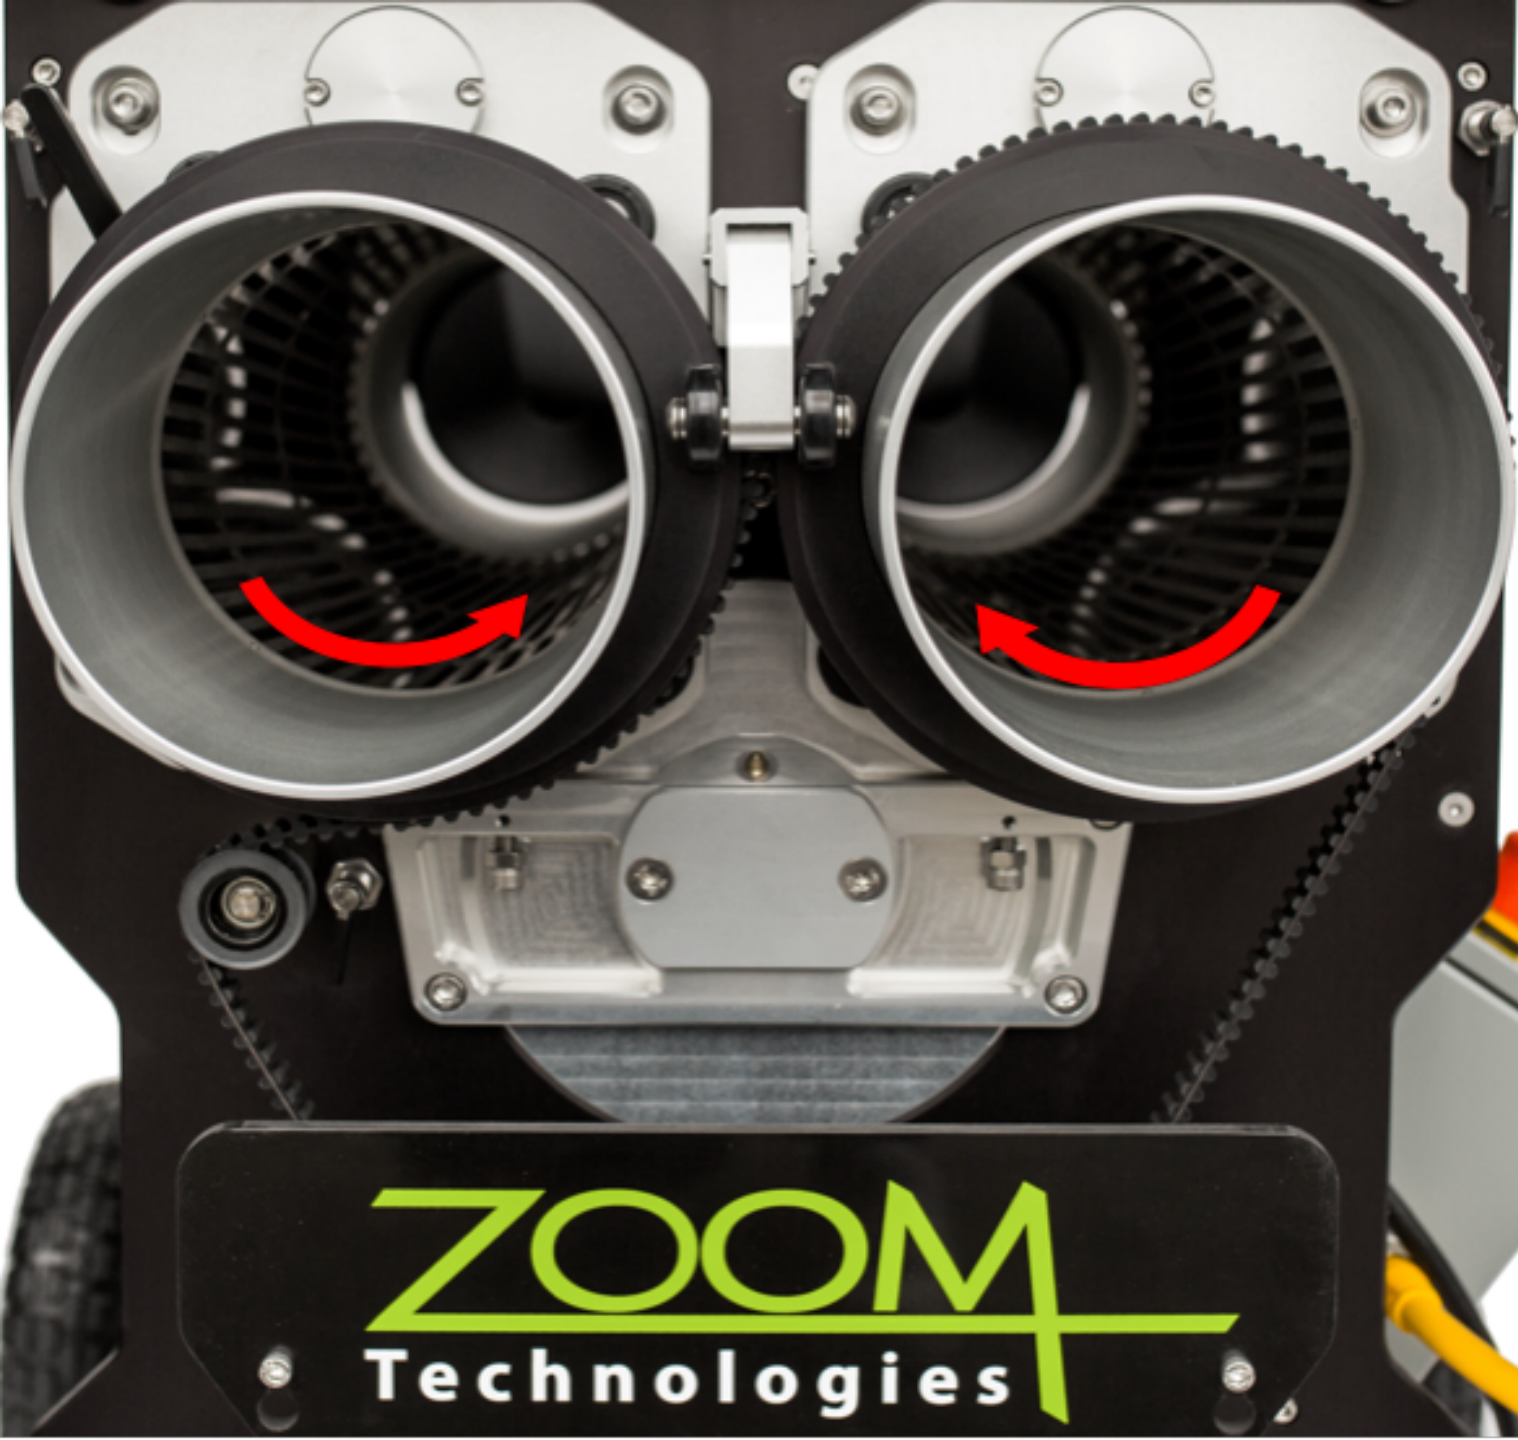

Up to 50 lbs dry material per hour

Wet & Dry Trim - Variable Speed.

Hybrid Tumblers are used for trimming wet and large dry flowers.

Narrow Slots Tumblers are designed to trim small fragile dry flowers.

Patented angular barrel slots with adjustable barrel speed 0-180
Zoom Pro can gently tumble different materials.

Counter-Rotate Barrel System

Take a close look at the Barrel rotation and you can understand how they work with the reel cutter. Plant material is naturally tumbling into the cutting zone for the best results. The Right Barrel rotates clockwise, while the Left Barrel rotates counter-clockwise. The Barrels counter rotation cause the material to naturally roll into cutting zone over the reel cutter. With this rotation only ONE Reel Blade is required for both Barrels. The reel cutter is positioned at the precise position for the best cutting action on both barrels.

Our machines are all designed to use this natural tumbling force to gently tumble and give the best trim possible.

Quick Release Barrel Bearing Unit

With the Barrel Guide system, you can simply lock and unlock the barrels with one hand.

To unlock you simply pull and lift the bearing arm. To lock you simply push the arm down and the lock retracts automatically locking the barrels in place.

Modularized Control Box with Tumbler Speed Control

Heavy duty UL listed control box with modular construction and fully sealed IP67.

Jack

Heavy duty built-in centered jack for adjustable tilt angle. Raise it up to send product through faster or drop it down for a tighter QC tolerance.

Low maintenance & easy to clean

It is very easy and simple to disassemble ZOOM Pro.
No tools are required.
The stationary blades swing up to make it easy to clean underneath.

Tandem Ready

Run tandem to get a top-quality cut and increase the production capacity. ZOOM Pro is tandem ready. Linking two ZOOM Pro's in tandem increases the feed rate and provides a better quality trimmed flower.

One ZOOM Pro Unit

Wet Trim	Dry Trim
100-150 lbs/hr	40-50lbs/hr

Two ZOOM Pro Units

Wet Trim	Dry Trim
200-300lbs/hr	80-100lbs/hr

Top-notch Customer Service

24/7, you get to talk to the engineer and also the owner of the product to answer all your inquiries in a timely manner.

Made in USA

ZOOM Pro is proudly designed, tested and built in USA. This allows us to respond with parts and service quickly. Down time is not an option especially during the harvest season.
